The velocity of this sprint is quite odd. We started off really well, in fact a bit too well, to the point where we had about a week with no additional progress because of this fact. Also after making some progress we can see that some tasks were actually added to the sprint because of a minor change to how classrooms work. Overall we made good progress with only smaller tasks and subtasks being incomplete.

This sprint is much improved over last sprint as we managed to get much more tasks done at the start and many more meetings to discuss features (specifically classrooms) throughout the sprint.
